Dear Joshua -

If you or Esther have a gal⁻, nonlysogenic K12 (L^s) which does not revert to gal⁺ and is transducible by λ , I would very much appreciate having one. I have been investigating the effect of multiplicity or frequency of transduction by HFT lysates; for some reason, under my conditions the curve is far from linear. However, the strain (112) which I have been using gives many spontaneous reversions on the plate, which sometimes confuses things.

Thank you very much.

Sincerely,

Dr. Allan
